Informal Documentation

Task: Scopus cite count support

Outline

1. Task
2. Usage
3. Development Guide
4. Possible Improvements

Task

Task

- Set Scopus cite counts on documents
- Create a graph option that displays cumulative cites per year of bibtex entries

Usage

Usage

- VegaJS charting system
 - Press the C button in taxonomy view
 - Configure Graph options as usual

Development Guide

Development Guide

- Where is cite data set? - BibtexResourceImpl in model.bibtex.util
 - If Scopus is detected in the source field during loading of a document, the cite count is set
 - This data is read from the bibtex field „Note“ as a string in the format of „cited by \$citeCount“
- How can I access cumulative cites per year? - ChartDataProvider in ui.chart.logic
 - calculateCitesPerYear() considers all loaded Documents and returns a map with year and cite data

Possible Improvements

Possible Improvements

- Option to exclude documents from cumulative cites per year
- Option to exclude years
